

VPN Failover setup

- 1) Primary VPN traffic is connecting through Mushroom device
- 2) A secondary IP is assigned on Firewall's WAN 2 from HCS Fiber Internet
- 3) Mushroom's WAN2 is assigned a different IP from HCS Fiber Internet
- 4) A secondary VPN connection goes through the WAN2 from Firewall and bypasses Mushroom device
- 5) Mushroom handles all load-balancing/aggregation for traffic coming in from WAN1
- 6) VPN Failover is handled directly by the Firewall on HCS Fiber Internet line
